This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

High molecular weight dissolved organic matter recovered by ultrafiltration in Antarctic snow

Heavy metal bound to high molecular weight dissolved organic matter

This study offers information on long-term transport of heavy metals taking into account that humic-like substances are a main component of atmospheric organic carbon.

Spearman rank correlation analysis among organic bound metal concentration and high molecular weight organic substance.
