This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- fourteen different tree species in terms of their capability to accumulate four airborne and soilborne HMs.
- BCF, (CBCI) and MAI were applied to compare bioaccumulation ability.
- Based on CBCI and MAI, *Pinus Eldarica*, *Wistaria Sinensis*, *Morus Alba*, and *Nigral Morus* had the highest bioaccumulation capacity of HMs, respectively
