This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Antiparasitic drugs are commonly used on farms.
- Veterinary compounds may have potentially toxic effects on soil collembolans.
- The collembola survival rate was affected by fipronil and fluzaron.
- Effects on reproduction were also observed for ivermectin and closantel.
- These compounds enter the environment through the excreta of treated animals.
