CO<sub>2</sub>-induced geochemical reactions in heterogeneous sandstone and potential conditions causing the tight cementation

Leilei Yang, Tianfu Xu, Guanhong Feng, Keyu Liu, Hailong Tian, Bo Peng, Chen Wang

PII: S0883-2927(17)30004-5

DOI: [10.1016/j.apgeochem.2017.03.003](https://doi.org/10.1016/j.apgeochem.2017.03.003)

Reference: AG 3839

To appear in: *Applied Geochemistry*

Received Date: 4 January 2017

Revised Date: 2 March 2017

Accepted Date: 3 March 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 CO<sub>2</sub>-induced geochemical reactions in heterogeneous sandstone  
2 and potential conditions causing the tight cementation

18

19 **Highlights:**

20 Reservoirs with Ca-rich minerals/water are apt to become tight after CO<sub>2</sub> intrusion.

21 CO<sub>2</sub>-water-rock reactions vary spatially and enhance reservoir heterogeneities.
