Total electron acceptor loading and composition affect hexavalent uranium reduction and microbial community structure in a membrane biofilm reactor

Aura Ontiveros-Valencia, Chen Zhou, Zehra Esra Ilhan, Louis Cornette de Saint Cyr, Rosa Krajmalnik-Brown, Bruce E. Rittmann

PII: S0043-1354(17)30724-8

DOI: [10.1016/j.watres.2017.08.060](https://doi.org/10.1016/j.watres.2017.08.060)

Reference: WR 13183

To appear in: *Water Research*

Received Date: 27 May 2017

Revised Date: 26 August 2017

Accepted Date: 28 August 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
