Porosity of spacer-filled channels in spiral-wound membrane systems: Quantification methods and impact on hydraulic characterization

A. Siddiqui, S. Lehmann, V. Haaksman, J. Ogier, C. Schellenberg, M.C.M. van Loosdrecht, J.C. Kruithof, J.S. Vrouwenvelder

PII: S0043-1354(17)30297-X

DOI: [10.1016/j.watres.2017.04.034](https://doi.org/10.1016/j.watres.2017.04.034)

Reference: WR 12833

To appear in: *Water Research*

Received Date: 10 January 2017

Revised Date: 6 April 2017

Accepted Date: 10 April 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Effect of feed channel porosity measurement deviation (%) on linear flow velocity and pressure drop
