Spatial impacts of inorganic ligand availability and localized microbial community structure on mitigation of zinc laden mine water in sulfate-reducing bioreactors

Dina Marie Drennan, Robert Almstrand, Jeffrey Ladderud, Ilsu Lee, Lee Landkamer, Linda Figueroa, Jonathan O. Sharp

PII: S0043-1354(17)30129-X

DOI: [10.1016/j.watres.2017.02.037](https://doi.org/10.1016/j.watres.2017.02.037)

Reference: WR 12706

To appear in: *Water Research*

Received Date: 26 October 2016

Revised Date: 17 February 2017

Accepted Date: 17 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

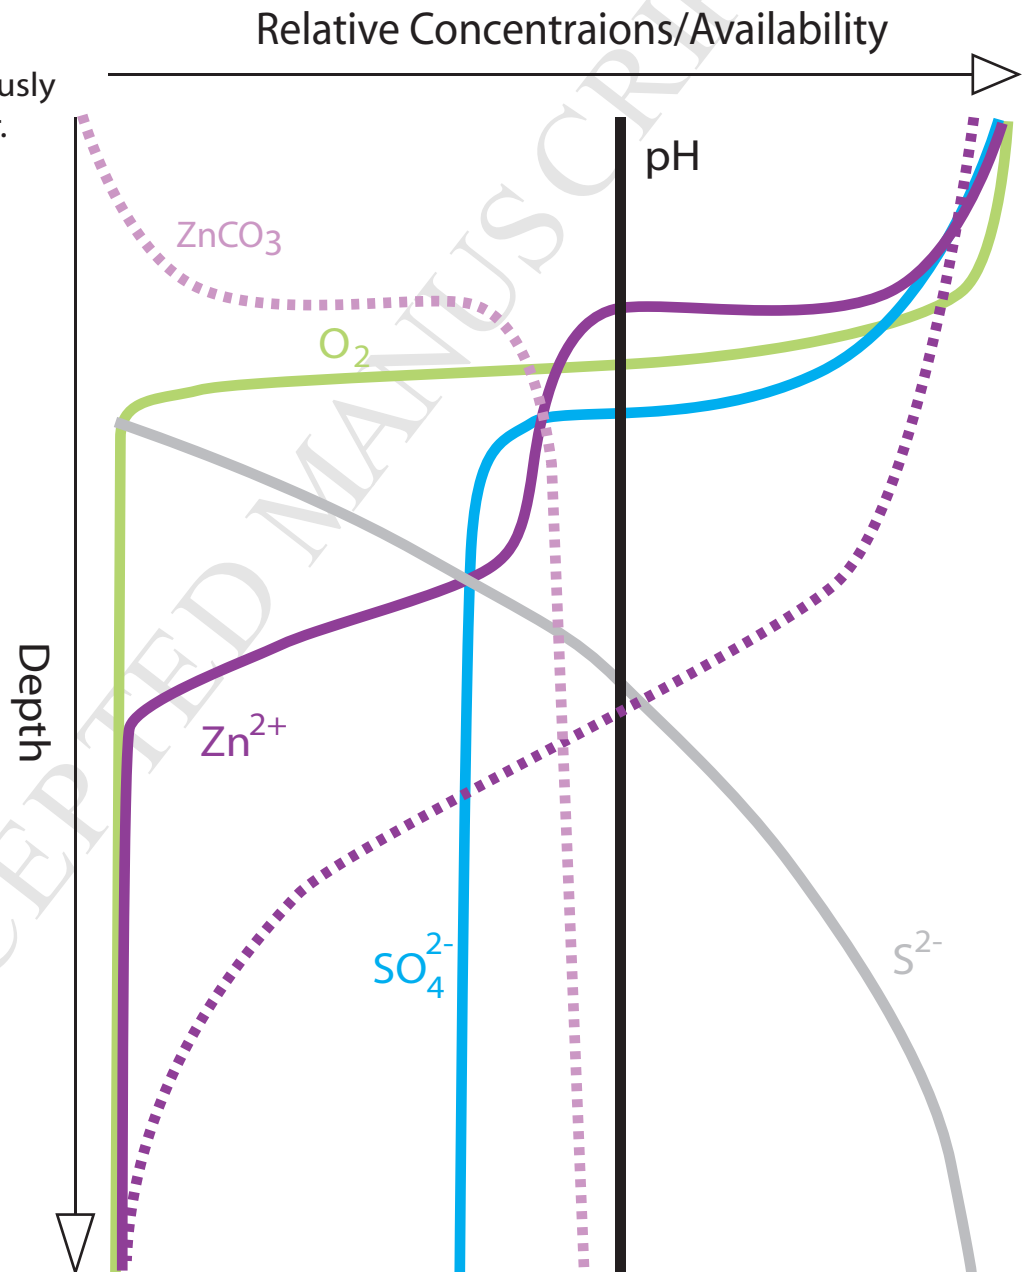

Limestone homogenously mixed through reactor.

..... Theoretical

———— Observed

Zinc-sulfide
Deposition
