A novel Eulerian approach for modelling cyanobacteria movement: Thin layer formation and recurrent risk to drinking water intakes

Mouhamed Ndong, David Bird, Tri Nguyen Quang, René Kahawita, David Hamilton, Marie Laure de Boutray, Michèle Prévost, Sarah Dorner

PII: S0043-1354(17)30850-3

DOI: [10.1016/j.watres.2017.10.021](https://doi.org/10.1016/j.watres.2017.10.021)

Reference: WR 13278

To appear in: *Water Research*

Received Date: 10 March 2017

Revised Date: 23 June 2017

Accepted Date: 9 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Drinking Water
Treatment Plant

**Hydrodynamic modeling of cyanobacteria
occurrence at the drinking water intake of
a shallow lake (Missisquoi Bay, Québec,
Canada)**

Scum formation at the water's surface
