Spatial vs. non-spatial eco-evolutionary dynamics in a tumor growth model

Li You, Joel S. Brown, Frank Thuijsman, Jessica J. Cunningham, Robert A. Gatenby, Jingsong Zhang, Kateřina Staňková

PII: S0022-5193(17)30397-1
DOI: [10.1016/j.jtbi.2017.08.022](https://doi.org/10.1016/j.jtbi.2017.08.022)
Reference: YJTBI 9186

To appear in: *Journal of Theoretical Biology*

Received date: 21 December 2016
Revised date: 7 August 2017
Accepted date: 28 August 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Cancer is an evolutionary spatial game in which different cell types compete for resources to proliferate and survive
- This paper analyzes a spatial game of metastatic castrate-resistant prostate cancer (mCRPC)
- For almost all case studies the predictions of the spatial model differ from those of a non-spatial one
- Non-spatial cancer models might be insufficient for capturing key elements of tumorigenesis
