Ecological monitoring in a discrete-time prey-predator model

M. Gámez , I. López , C. Rodríguez , Z. Varga , J. Garay

PII: S0022-5193(17)30302-8
DOI: [10.1016/j.jtbi.2017.06.025](https://doi.org/10.1016/j.jtbi.2017.06.025)
Reference: YJTBI 9121

To appear in: *Journal of Theoretical Biology*

Received date: 20 January 2017
Revised date: 9 June 2017
Accepted date: 20 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Methodological development of monitoring in discrete-time dynamic ecological models.
- Estimation of the state process observing a single species in a prey-predator system.
- Monitoring of abiotic environmental change in the prey-predator system.
- Possible extensions to larger, more complex ecosystems with abiotic exosystems.
