

## Accepted Manuscript

Optimal and stable random pattern formations

Vladimir Mityushev

PII: S0022-5193(17)30164-9  
DOI: [10.1016/j.jtbi.2017.04.010](https://doi.org/10.1016/j.jtbi.2017.04.010)  
Reference: YJTBI 9034

To appear in: *Journal of Theoretical Biology*

Received date: 25 March 2016  
Revised date: 23 March 2017  
Accepted date: 7 April 2017

Please cite this article as: Vladimir Mityushev, Optimal and stable random pattern formations, *Journal of Theoretical Biology* (2017), doi: [10.1016/j.jtbi.2017.04.010](https://doi.org/10.1016/j.jtbi.2017.04.010)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Graph model to describe the vast range of patterns is developed.
- Optimal graphs which determine biological structures are described.
- It is explained why nature prefers the hexagonal array over the square one.
- Why the leopard skin has rather hexagonal structure than square one.
