A Theoretical Analysis of Anatomical and Functional Intestinal Slow Wave Re-entry: Intestinal re-entry simulations

Peng Du , Gregory O'Grady , Leo K. Cheng

PII: S0022-5193(17)30185-6
DOI: [10.1016/j.jtbi.2017.04.021](https://doi.org/10.1016/j.jtbi.2017.04.021)
Reference: YJTBI 9046

To appear in: *Journal of Theoretical Biology*

Received date: 19 October 2016
Revised date: 19 April 2017
Accepted date: 21 April 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Anatomical and functional re-entry activities are modeled.
- Re-entry are maintained via entrainment at a higher frequency than the baseline.
- Slow wave refractory periods play a key role in the termination of re-entry.
- Secondary stimulus can be used to terminate re-entry.
