Noise slows the rate of Michaelis-Menten reactions

J. David Van Dyken

PII: S0022-5193(17)30325-9
DOI: [10.1016/j.jtbi.2017.06.039](https://doi.org/10.1016/j.jtbi.2017.06.039)
Reference: YJTBI 9135

To appear in: *Journal of Theoretical Biology*

Received date: 9 February 2017
Revised date: 2 June 2017
Accepted date: 29 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Substrate noise slows the rate of isolated Michaelis-Menten reactions.
- Reaction network architecture determines if this slow-down is buffered by feedback.
- With substrate dilution, as occurs in living cells, noise always slows MM reactions.
- Predictions proved to be more accurate with QSSA than elementary reactions.
