This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Avian influenza A H1N1 and H7N9 have resulted significant human cases
- Construct avian influenza models with different avian growth laws
- Analyze the dynamical behavior of these models completely
- Obtain the threshold value for the prevalence of avian influenza
- Discuss the occurrence of periodic solutions with avian Allee effect
