This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1

Highlights

- We propose and investigate single-species population models with in a polluted environment.
- The psychological effect level is discussed within the deterministic model (MD) as well as the stochastic model (SD).
- Weak persistence and permanence of the solution (MD) depend on the psychological effect level.
- Weak persistence in the mean of the solution (SD) has nothing to do with psychological effect level.
- Stochastic permanence of the solution (SD) relies on the psychological effect level.
- Examples and numerical simulations are separately carried out to check the validity of the main results.
