This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Antibodies to wheat proteins are important in autism spectrum disorder, Crohn's and celiac disease.
- Blood samples reacted to both gluten and non-gluten proteins.
- Reaction against CXCR3-binding gliadin peptide was strongest.
- CXCR3-binding gliadin peptide may be considered as a novel target.
