Title: Effect of Ferrous Metal Presence on Lead Leaching in Municipal Waste Incineration Bottom Ashes

Author: Wesley N. Oehmig Justin G. Roessler Jianye Zhang
Timothy G. Townsend

PII: S0304-3894(14)00778-X
DOI: <http://dx.doi.org/doi:10.1016/j.jhazmat.2014.09.040>
Reference: HAZMAT 16288

To appear in: *Journal of Hazardous Materials*

Received date: 23-5-2014
Revised date: 14-8-2014
Accepted date: 3-9-2014

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research Highlights:

- Addition of iron to WTE ash reduced lead leaching
- Removal of ferrous metals from WTE ash increased lead leachability
- Advanced metals recovery may increase potential for WTE ash to be hazardous for lead
