Highlights

- camera traps and hand-held cameras: which better to determine and examine behaviour
- examined species was the wild boar
- 5 minutes videos were cutting-out short periods (20, 10 and 5 seconds)
- length can modify differences from which we can get a fair view of social problems

Abstract

The animal welfare is maybe the main factor in livestock breeding, including keeping wild animals. In order not have any problems (health, economic), animals behaviour analyses with cameras can be an appropriate and relatively cheap solution. The present study aims to show the difference between the camera traps and hand-held cameras: which can be used better to determine and examine the
