This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## **Dogs' responses to visual, auditory, and olfactory cat-related cues**

### **Highlights**

- We tested dogs' responses to visual and auditory cat-related and control stimuli.
- Dogs oriented more to the auditory cat stimulus than to the visual cat stimulus.
- Dogs that had hurt small animals were more attentive to the auditory stimuli.
- Responses to cat sounds might predict which shelter dogs will get along with cats.
