Coupled Incompressible Smoothed Particle Hydrodynamics Model
for Continuum-Based Modelling of Sediment Transport

Gourabananda Pahar, Anirban Dhar

PII: S0309-1708(16)30425-0
DOI: [10.1016/j.advwatres.2017.02.003](https://doi.org/10.1016/j.advwatres.2017.02.003)
Reference: ADWR 2775

To appear in: *Advances in Water Resources*

Received date: 9 September 2016
Revised date: 20 December 2016
Accepted date: 1 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Solenoidal Granular flow modelling using divergence-free ISPH with rheological approximation.
- A unique attempt to couple granular flow with Newtonian fluid model.
- Capable of identifying dry and wet granular phases.
