Geophysical characterisation of the groundwater-surface water interface

P.J. McLachlan , J.E. Chambers , S.S. Uhlemann , A. Binley

PII: S0309-1708(17)30446-3
DOI: [10.1016/j.advwatres.2017.09.016](https://doi.org/10.1016/j.advwatres.2017.09.016)
Reference: ADWR 2950

To appear in: *Advances in Water Resources*

Received date: 30 April 2017
Revised date: 4 August 2017
Accepted date: 14 September 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Properties and processes of the GW-SW interface are variable in space and time.
- Revealing hydrological and biogeochemical heterogeneity remains a challenge.
- Geophysics offer useful tools for addressing variability across multiple scales.
- Future studies should incorporate geophysical progress gained in parallel fields.
