This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Generalized advection-dispersion equation for heterogeneous advection, multi-rate mobile-immobile mass exchange, and first-order reaction
- Analytical solutions are in agreement with numerical CTRW particle tracking results
- Relationship between flux and resident concentration for non-Fickian transport and first-order reaction
- Results indicate that anomalous plume transport may appear Fickian in breakthrough curves but spreading rate and plume spatial distribution are non-Fickian
