Modelling benthic macrofauna and seagrass distribution patterns in a North Sea tidal basin in response to 2050 climatic and environmental scenarios

Anja Singer, Gerald Millat, Joanna Staneva, Ingrid Kröncke

PII: S0272-7714(17)30126-9

DOI: [10.1016/j.ecss.2017.02.003](https://doi.org/10.1016/j.ecss.2017.02.003)

Reference: YECSS 5379

To appear in: *Estuarine, Coastal and Shelf Science*

Received Date: 23 August 2016

Revised Date: 1 February 2017

Accepted Date: 2 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 **Modelling benthic macrofauna and seagrass distribution patterns in a North Sea tidal**
2 **basin in response to 2050 climatic and environmental scenarios**
