ABSTRACT. We present an approach of calculating the group of braided autoequivalences of the category of representations of the Drinfeld double of a finite dimensional Hopf algebra H and thus the Brauer-Picard group of H -mod. We consider two natural subgroups and a subset as candidates for generators. In this article H is the group algebra of a finite group G . As our main result we prove that any element of the Brauer-Picard group, fulfilling an additional cohomological condition, decomposes into an ordered product of our candidates.

For elementary abelian groups G our decomposition reduces to the Bruhat decomposition of the Brauer-Picard group, which is in this case a Lie group over a finite field. Our results are motivated by and have applications to symmetries and defects in $3d$ -TQFT and group extensions of fusion categories.

CONTENTS

1. Introduction	2
2. Preliminaries	7
2.1. Modules over the Drinfeld double	7
2.2. Hopf-Galois-Extensions	9
3. Decomposition of $\text{Aut}_{\text{Hopf}}(DG)$	11
4. Subgroups of $\text{Aut}_{br}(DG\text{-mod})$	13
4.1. General considerations	13
4.2. Automorphism Symmetries	16
4.3. B-Symmetries	17
4.4. E-Symmetries	20
4.5. Partial E-M Dualizations	22
5. Main Result	24
6. Examples and the full Brauer-Picard group	28
6.1. General considerations on reflections	28
6.2. General considerations on induction	30
6.3. Elementary abelian groups	31
6.4. Simple groups	32
6.5. Lie groups and quasisimple groups	32
