Abstract

In this paper we classify the isomorphism classes of four dimensional nilpotent associative algebras over a field \mathbb{F} , studying regular subgroups of the affine group $\text{AGL}_4(\mathbb{F})$. In particular we provide explicit representatives for such classes when \mathbb{F} is a finite field, the real field \mathbb{R} or an algebraically closed field.

Keywords: Regular subgroup, congruent matrices, nilpotent algebra, finite field

1. Introduction

The aim of this paper is the classification of the isomorphism classes of four dimensional nilpotent associative algebras over a field \mathbb{F} , exploiting the properties of regular subgroups of the affine group $\text{AGL}_4(\mathbb{F})$.

It is worth recalling that the affine group $\text{AGL}_n(\mathbb{F})$ can be identified with the subgroup of $\text{GL}_{n+1}(\mathbb{F})$ consisting of the invertible matrices having $(1, 0, \dots, 0)^T$ as first column. It follows that $\text{AGL}_n(\mathbb{F})$ acts on the right on the set $\mathcal{A} = \{(1, v) : v \in \mathbb{F}^n\}$ of affine points. A subgroup R of $\text{AGL}_n(\mathbb{F})$ is called regular if it acts regularly on \mathcal{A} , namely if for every $v \in \mathbb{F}^n$ there exists a unique element in R having $(1, v)$ as first row. Writing the elements r of a regular subgroup $R \leq \text{AGL}_n(\mathbb{F})$ as

$$r = \begin{pmatrix} 1 & v \\ 0 & I_n + \delta_R(v) \end{pmatrix} = \mu_R(v), \quad (1.1)$$

we give rise to the functions $\delta_R : \mathbb{F}^n \rightarrow \text{Mat}_n(\mathbb{F})$ and $\mu_R : \mathbb{F}^n \rightarrow R$. For instance, the translation subgroup \mathcal{T}_n of $\text{AGL}_n(\mathbb{F})$ is a regular subgroup, corresponding to the choice $\delta_{\mathcal{T}_n}$ equal to the zero function.

We focus our attention on the set $\Delta_n(\mathbb{F})$ of the regular subgroups R of $\text{AGL}_n(\mathbb{F})$ with the property that δ_R is a linear function. Notice that if R is abelian, then $R \in \Delta_n(\mathbb{F})$ (see [2, 12]); however, for $n \geq 3$, the set $\Delta_n(\mathbb{F})$
