Abstract

We consider a reaction-diffusion equation on a network subjected to dynamic boundary conditions, with time delayed behaviour, also allowing for multiplicative Gaussian noise perturbations. Exploiting semigroup theory, we rewrite the aforementioned stochastic problem as an abstract stochastic partial differential equation taking values in a suitable product Hilbert space, for which we prove the existence and uniqueness of a mild solution. Eventually, a stochastic optimal control application is studied.

AMS Subject Classification: 60H15, 65C30, 93E20, 35K57

Key Words and Phrases: Stochastic reaction-diffusion equations; dynamic boundary conditions; time-delayed boundary conditions; multiplicative Gaussian perturbations; Semigroup theory; Stochastic Partial Differential Equations in infinite dimension; Stochastic Optimal Control.

1 Introduction

Recent years have seen an increasing attention to the study of diffusion problems on networks, especially in connection with the theory of stochastic processes. In fact, there is a broad area of possible applications where the
