Microbe-clay interactions as a mechanism for the preservation of organic matter and trace metal biosignatures in black shales

Tiffany Playter, Kurt Konhauser, George Owtrim, Cheryl Hodgson, Tyler Warchola, Aleksandra Mloszewska, Bruce Sutherland, Andrey Bekker, J.-P. Zonneveld, S. George Pemberton, Murray Gingras

PII: S0009-2541(17)30193-6
DOI: doi: [10.1016/j.chemgeo.2017.04.007](https://doi.org/10.1016/j.chemgeo.2017.04.007)
Reference: CHEMGE 18310

To appear in: *Chemical Geology*

Received date: 5 May 2016

Revised date: 5 April 2017

Accepted date: 8 April 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Microbe-clay interactions as a mechanism for the preservation of organic matter and trace metal biosignatures in black shales
