This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Small changes in Cu redox state and speciation generate large isotope fractionation during adsorption and incorporation of Cu by a phototrophic biofilm

Submitted to *Geochimica et Cosmochimica Acta*, after revision May 2017

Highlights:

- Cu adsorption onto phototrophic biofilm induces enrichment of biomass in heavy isotope.
- Heavy isotope is favored by Cu complexation with exopolymeric substances.
- Light isotope is favored by Cu reduction inside the biofilm.
