This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Fluid-fluxed melting of mantle versus
decompression melting of hydrous mantle plume as
the cause of intraplate magmatism over a stagnant
slab: implications from Fukue Volcano Group, SW
Japan
