This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 Subject: PREVET-13-296: An economic analysis of hyperketonemia testing and propylene
2 glycol treatment strategies in early lactation dairy cattle
3
4

5 **Revision highlights:**

- 6 • We model simulated hyperketonemia testing and propylene glycol treatment strategies.
 - 7 • We examine economic outcomes based on herd hyperketonemia incidence.
 - 8 • Testing and treatment is economically beneficial above a 25% herd incidence.
 - 9 • Variation in economic benefit is largely based on early lactation disease risks.
- 10
