Dopamine receptor D5 deficiency results in a selective reduction of hippocampal NMDA receptor subunit NR2B expression and impaired memory

Rodrigo Moraga-Amaro, Hugo González, Valentina Ugalde, Juan Pablo Donoso-Ramos, Daisy Quintana-Donoso, Marcelo Lara, Bernardo Morales, Patricio Rojas, Rodrigo Pacheco, Jimmy Stehberg

PII: S0028-3908(15)30214-8

DOI: [10.1016/j.neuropharm.2015.12.018](https://doi.org/10.1016/j.neuropharm.2015.12.018)

Reference: NP 6116

To appear in: *Neuropharmacology*

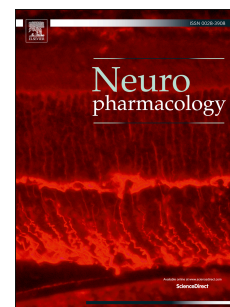

Received Date: 28 August 2015

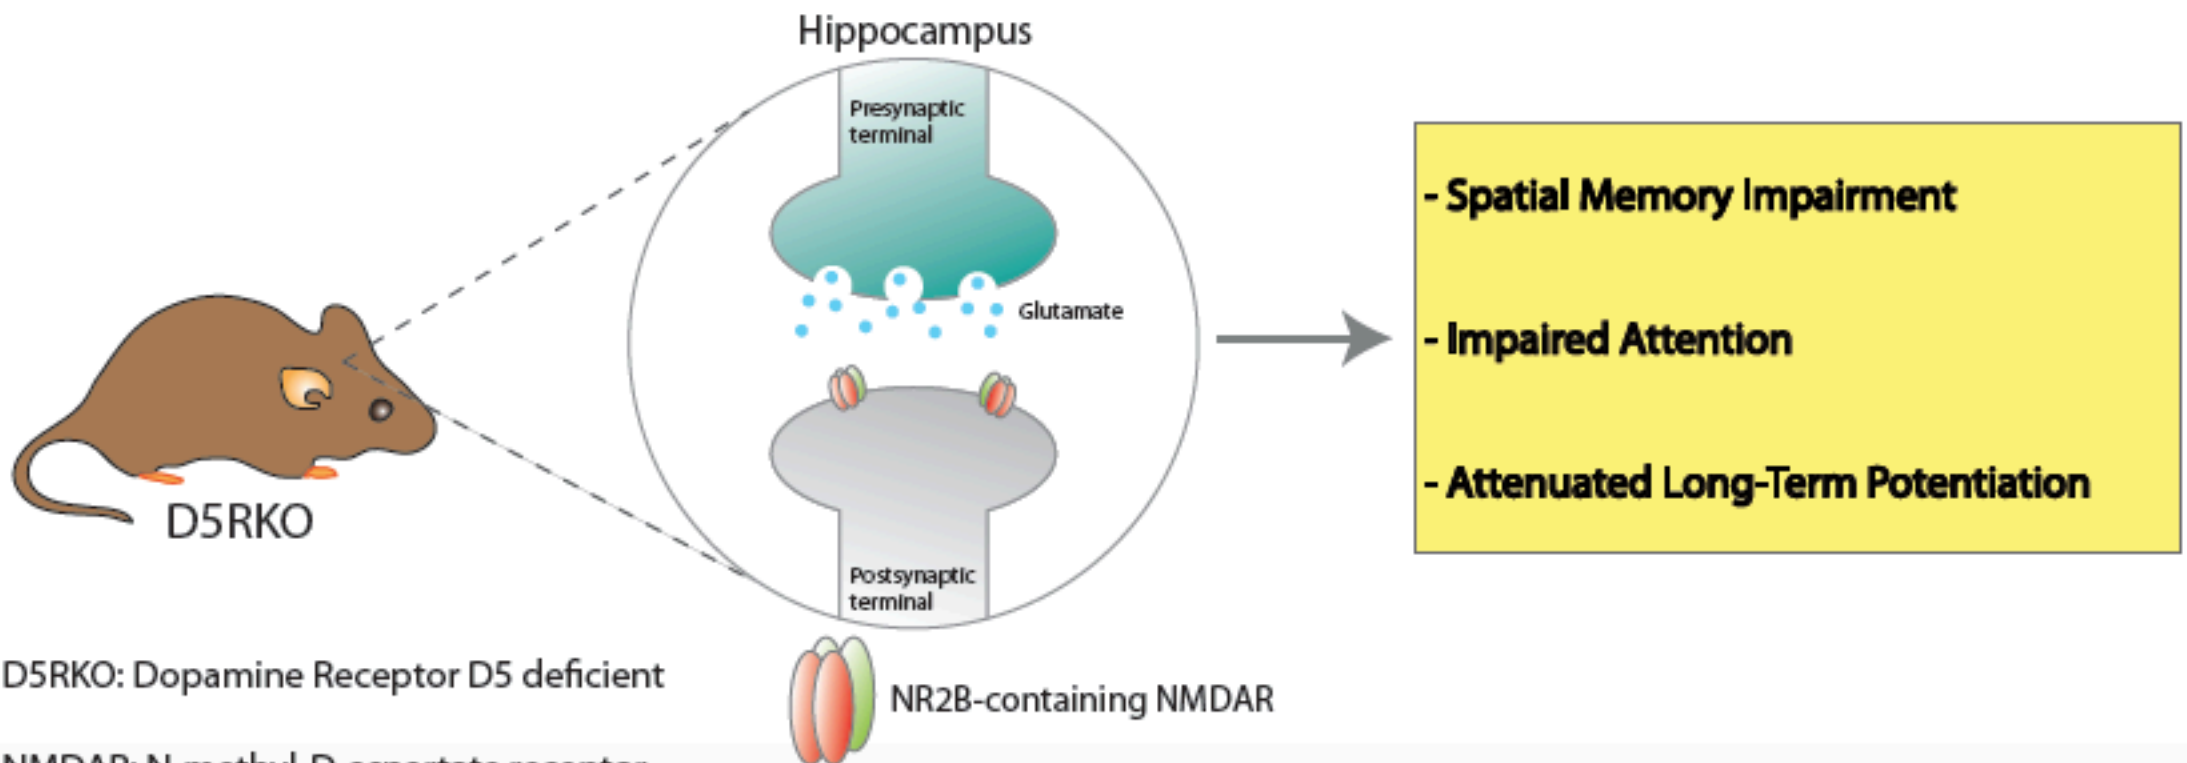

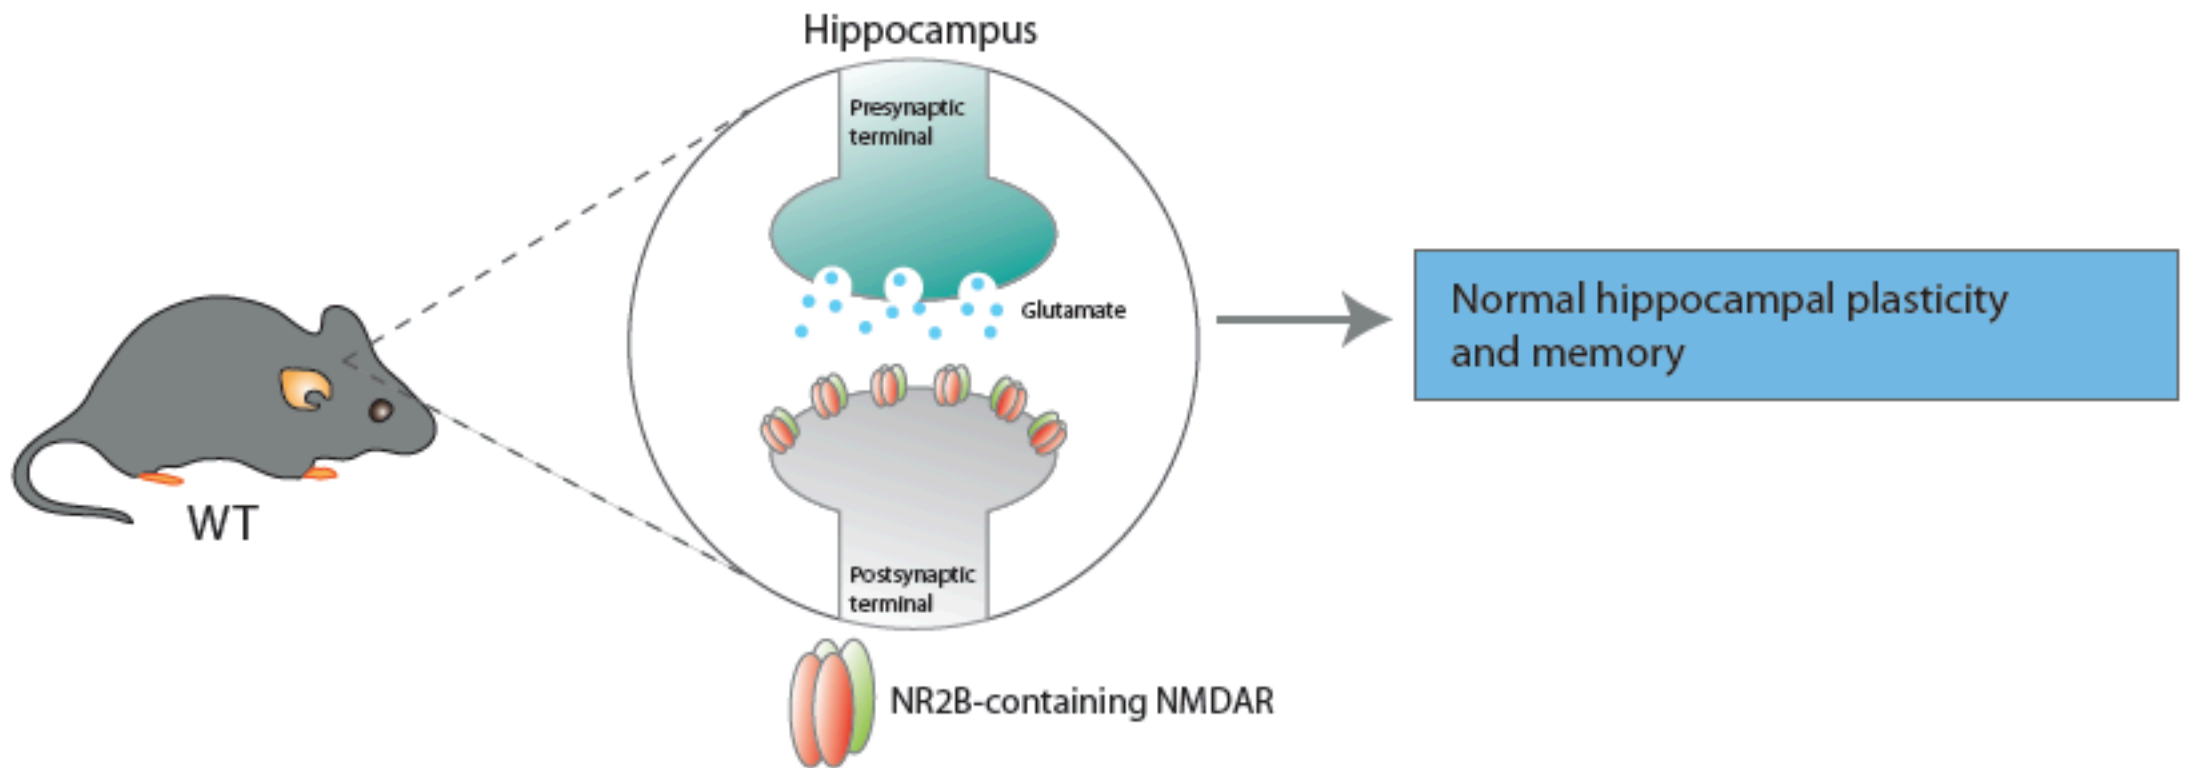

Revised Date: 30 November 2015

Accepted Date: 17 December 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

D5RKO: Dopamine Receptor D5 deficient

NMDAR: N-methyl-D-aspartate receptor
