Title: Delayed effects of developmental exposure to low levels of the aryl hydrocarbon receptor agonist 3,3',4,4',5-pentachlorobiphenyl (PCB126) on adult zebrafish behavior

Author: Lilah Glazer Mark E. Hahn Neelakanteswar Aluru

PII: S0161-813X(15)30029-2
DOI: <http://dx.doi.org/doi:10.1016/j.neuro.2015.11.012>
Reference: NEUTOX 1899

To appear in: *NEUTOX*

Received date: 17-8-2015
Revised date: 18-11-2015
Accepted date: 19-11-2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Developmental exposure to low PCB126 levels causes delayed neurobehavioral effects
- Larval visual-motor behavior was not affected by exposure
- Exposed adult zebrafish lacked short and long-term habituation to novel environment
- *Cyp1a* was induced in exposed embryos and larvae but not adult brains
