This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- PIP data from 2007-2013 were obtained from the EMA pediatrics website
- Data were evaluated as recorded and also adjusted by changing all PM dates to their original P dates
- Thorough examination of the adjusted PIP data support that the number of juvenile animal studies being included in PIPs per year is not increasing
- Data support that juvenile animal studies are mostly proposed with a single species, the rat
- Multi-species juvenile animal studies for an agreed PIP are infrequent
