This research was conducted at Johns Hopkins University, Baltimore, MD.

**Abstract word count** (200 max): 200

**Manuscript word count** (excluding abstract, references, and legends): 3,868

**Conflicts of Interest and Source of Funding:** Michelle Kho was funded by a Canadian Institutes of Health Research (CIHR) Fellowship Award and Bisby Prize; she currently holds a Canada Research Chair in Critical Care Rehabilitation and Knowledge Translation. Alexander Truong received support from the National Institutes of Health (grant number T32HL007534-31). Blinded outcomes assessments were funded through grant # UL1 RR 025005 from the National Center for Research Resources, National Institutes of Health (NIH). Care Rehab Products (McLean, VA) provided NMES machines for use during the study. The CIHR, NIH, and Care Rehab Products had no role in the design, conduct, or planned statistical analysis of the study and had no influence on the analysis, interpretation, or decision to submit this study for publication. For the remaining authors, no conflicts of interest or source of funding were declared.
