

## Accepted Manuscript

Unravelling evolution of *Nanog*, the key transcription factor involved in self-renewal of undifferentiated embryonic stem cells, by pattern recognition in nucleotide and tandem repeats characteristics

Maryam Pashaiasl, Khodadad Khodadadi, Amir Hossein Kayvanjoo, Roghiyeh Pashaei-asl, Esmaeil Ebrahimie, Mansour Ebrahimi

PII: S0378-1119(15)01509-7  
DOI: doi: [10.1016/j.gene.2015.12.023](https://doi.org/10.1016/j.gene.2015.12.023)  
Reference: GENE 41055

To appear in: *Gene*

Received date: 26 June 2015  
Revised date: 10 December 2015  
Accepted date: 10 December 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Unravelling evolution of *Nanog*, the key transcription factor involved in self-renewal of undifferentiated embryonic stem cells, by pattern recognition in nucleotide and tandem repeats characteristics**
