This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Multilocus analysis indicates that *Trypanosoma cruzi* I genetic substructure associated with sylvatic and domestic cycles is not an attribute conserved throughout Colombia

Andrés Gómez-Palacio¹, Juan Lopera², Winston Rojas², Gabriel Bedoya², Omar Cantillo-Barraza¹, Johana Marín-Suarez, Omar Triana-Chávez¹, Ana Mejía-Jaramillo^{1*}
