This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Comparative Long-Term Outcomes after Cardiac Resynchronization Therapy in Right Ventricular Paced Patients versus Native Wide Left Bundle Branch Block

Short Title: Right ventricular pacing and upgrade to CRT
