Phosphodiesterase 5 inhibition at disease onset prevents experimental autoimmune encephalomyelitis progression through immunoregulatory and neuroprotective actions

Paula Pifarré, María Gutierrez-Mecinas, Judith Prado, Lorena Usero, Carme Roura-Mir, Mercedes Giralt, Juan Hidalgo, Agustina Garcia

PII: S0014-4886(13)00324-5
DOI: doi: [10.1016/j.expneurol.2013.10.021](https://doi.org/10.1016/j.expneurol.2013.10.021)
Reference: YEXNR 11573

To appear in: *Experimental Neurology*

Received date: 17 September 2013
Revised date: 25 October 2013
Accepted date: 30 October 2013

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Phosphodiesterase 5 inhibition at disease onset prevents experimental autoimmune encephalomyelitis progression through immunoregulatory and neuroprotective actions
