Title: Comparisons of chewing rhythm, craniomandibular morphology, body mass and height between mothers and their biological daughters

Author: Catherine Cho Ke'ale Louie Ahmed Maawadh
Geoffrey E. Gerstner

PII: S0003-9969(15)30021-2
DOI: <http://dx.doi.org/doi:10.1016/j.archoralbio.2015.08.004>
Reference: AOB 3440

To appear in: *Archives of Oral Biology*

Received date: 13-11-2014
Revised date: 27-7-2015
Accepted date: 8-8-2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Height and weight were significantly correlated between mother-daughter pairs
- Jaw “length”, i.e., Co-Gn and Go-Gn also correlated between mother-daughter pairs
- Mean chew-cycle duration did not correlate between mother-daughter pairs.
- Mean chew-cycle duration correlated positively with maternal ANB angle and height.
- Mean chew-cycle duration correlated negatively with Co-Gn in daughters.
