This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

All studies published in Gastroenterology are embargoed until 3PM ET of the day they are published as corrected proofs on-line. Studies cannot be publicized as accepted manuscripts or uncorrected proofs.

ACCEPTED MANUSCRIPT

Title

Inhibition of HCV Replication by Cyclophilin Antagonists is Linked to Replication Fitness and Occurs by Inhibition of Membranous Web Formation

Short title

Mechanism of HCV inhibition by cyclophilin inhibitors

Authors

Vanesa Madan^{1,2}, David Paul¹, Volker Lohmann¹ and Ralf Bartenschlager^{1,2}

¹Department for Infectious Diseases, Molecular Virology, Heidelberg University, Heidelberg, Germany; ²German Center for Infection Research, Heidelberg University

Grant support

This work was supported in part by grants from the Deutsche Forschungsgemeinschaft (SFB/TRR83, TP13 and FOR 1202, TP1).

Abbreviations used in this paper:

Amino acid residues: aas; CypA: cyclophilin A; CsA: cyclosporine A; CsD: cyclosporine D; RLU: Relative light units; HCV: Hepatitis C virus; IFNα: Interferon alpha; IRES: Internal ribosome entry site; pegIFNα: pegylated IFNα; RBV: Ribavirin
