Title: Variable structure control optimized by differential evolution approach applied to continuous stirred tank reactor

Author: Leandro dos Santos Coelho Helon Vicente Hultmann
Ayala Antonio Augusto Rodrigues Coelho

PII: S0263-8762(15)00171-9
DOI: <http://dx.doi.org/doi:10.1016/j.cherd.2015.05.020>
Reference: CHERD 1886

To appear in:

Received date: 11-8-2014
Revised date: 28-4-2015
Accepted date: 13-5-2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Self-tuning discrete-time VSC using an improved differential evolution is proposed

DE is adopted to VSC design applied to a nonlinear stirred tank reactor

Mutation strategy based on population diversity is useful to improve the DE convergence
