

# Biological Psychiatry

A Journal of Psychiatric Neuroscience and Therapeutics

## GUIDE FOR AUTHORS

*Biological Psychiatry* is the official journal of the Society of Biological Psychiatry. The *Journal* rapidly publishes reports of novel results on a broad range of topics related to the pathophysiology and treatment of major neuropsychiatric disorders. Both basic and clinical neuroscience contributions are encouraged, particularly those addressing genetic and environmental risk factors, neural circuitry and neurochemistry, and important new therapeutic approaches. Except where explicitly stated otherwise, *Biological Psychiatry* conforms to the guidelines set forth by the International Committee of Medical Journal Editors (ICMJE) (see Recommendations for the Conduct, Reporting, Editing, and Publication of Scholarly Work in Medical Journals [August 2013]: Available from <http://www.ICMJE.org>).

All new manuscripts must be submitted through the journal website: <http://ees.elsevier.com/bps>. Please direct questions to the Editorial Office at 214-648-0880, or [Biol.Psych@utsouthwestern.edu](mailto:Biol.Psych@utsouthwestern.edu).

**ARTICLE TYPES AND CONTENT** Our readership is diverse, and authors should consider that many of our readers are in specialty areas other than their own. It is important, therefore, to avoid jargon. A focused and clearly written manuscript is more likely to appeal to the readership. The brevity and clarity of the presentation will be taken into consideration by the Editors. In highly specialized areas, the introduction should be a concise primer.

**Archival Reports** are original research papers reporting novel results on a broad range of topics related to the pathophysiology and treatment of major neuropsychiatric disorders. Clear explication of methods and results is critical to facilitate review of papers and replicability of findings. The main text must be no more than 4000 words, and be structured with sections entitled and ordered as follows: Introduction, Methods and Materials, Results, Discussion. Abstracts should be 250 words or less, structured with sections entitled as follows: Background, Methods, Results, Conclusions. Figures, tables, and references should be included as necessary.

**Priority Communications** are Archival Reports that clearly document novel experimental findings of unusual and timely significance. These papers should represent a conceptual advance in the field and are not intended for publication of preliminary results. They are expected to be acceptable for publication in essentially the form submitted. Papers that require substantial revisions or do not fit the criteria will be considered as Archival Reports. See Archival Reports for structure, word length, and other requirements.

**Reviews** are concise (4000 words or less) and focus on current aspects of interest and research. Up to 150 references are allowed. Abstracts are

**PREPARATION & SUBMISSION REQUIREMENTS** All manuscripts must be submitted in electronic form through the *Biological Psychiatry* online submission and review website (<http://ees.elsevier.com/bps/>). Submission is a representation that all authors have personally reviewed and given final approval of the version submitted, and neither the manuscript nor its data have been previously published (except in abstract) or are currently under consideration for publication elsewhere. Authors must identify figures, tables and/or data that have been published elsewhere, and permission from the copyright holder must be obtained to reproduce or modify the materials.

Effective September 1, 2014, the *Journal* has implemented a submission notification policy. Upon receipt of every new submission, the journal will notify every individual named as an author on the submitted article. This email will provide details of the submission, including the full author list and the text of both the acknowledgments and disclosures sections. This policy change means that the journal now requires valid email addresses for all coauthors; institutional email addresses are strongly preferred.

Files (cover letter, text, figures) will be uploaded separately during the submission process, and should be labeled with appropriate and descriptive file names (e.g., SmithText.doc, Fig1.eps, Table3.doc). The system will then build a single PDF of the submission from the uploaded files.

Upon finalizing the submission, the corresponding author will immediately receive an e-mail notification that the submission has been received by the Editorial Office. If such documentation has not been received, then a problem likely occurred during the submission process and should be investigated. Any manuscripts not conforming to these guidelines will be returned to the author for correction before the manuscript is processed. The manuscript status is available to the corresponding author at all times by logging into the website.

**COVER LETTER** A cover letter is required for submissions designated as Priority Communications to outline the significance of the work; it is optional for all other submissions. A cover letter must be uploaded as a separate file, as it is not made available to peer reviewers.

**MANUSCRIPT** Manuscripts should be structured with sections entitled and ordered as follows: Title Page, Abstract, Text, Acknowledgments, Financial Disclosures, References, Footnotes, and Table/Figure Legends. Begin all sections on separate pages. The text of research papers should be organized into sections titled Introduction, Methods and Materials, Results, and Discussion. Tables may also be included in a text format at the end of the manuscript file. The manuscript file should be uploaded in Word, not in PDF.

unstructured and limited to 250 words. Figures and tables should summarize or illustrate important points.

**Techniques and Methods** articles feature new, improved, or noteworthy comments about techniques or methods relevant to basic or clinical research in, or treatment of, psychiatric disorders. Maximum length is 3000 words (main body of text only; excludes acknowledgments, disclosures, legends, and references). Abstracts are unstructured and limited to 150 words. Figures and tables should illustrate important points and are limited to a half-page (typeset).

**Correspondence** is directly related to methods, procedures or interpretation of data presented in work recently published in our journal and uses new analysis of data presented, the support of previously published work, and/or scientific points to be addressed based on methodological issues. It may also present a case-report that clearly and unambiguously illustrates important new principles that have not yet been demonstrated in clinical trials. When warranted, a reply from author(s) of the original work is solicited. Correspondence is published online only as e-content. Maximum length is 1000 words (main body of text only). No abstract and no supplements are allowed. Figures and tables are not encouraged, but allowed to illustrate important points.

**Commentaries and Editorials** address points directly related to articles in the concurrent issue, and/or focus on topics of current research and interest. These are generally invited, but interested contributors are encouraged to contact the Editor. A summarizing figure or table is encouraged. Length is restricted to 1500 words with no more than 10 references.

**Style** Manuscripts should be double-spaced. Pages must be numbered and include the first author's name. Acronyms must be spelled out on first use in both the abstract and the text, and where used in tables or figures, in each of their legends. American spellings should be used. The location (city and state or country) of all manufacturers should be provided. Gene symbols should be italicized and differentiated by species. Human symbols should be all uppercase, whereas symbols for rodents and other species should be lowercase using only an initial capital. Protein products, regardless of species, are not italicized and use all uppercase letters. Accepted manuscripts are copyedited to conform to the *AMA Manual of Style*.

**Title Page** On the title page, include the full names of all authors and their academic or professional affiliations, along with the corresponding author's complete contact information. Multiple corresponding authors are not allowed. Six key words, used for indexing, should also be included. Separately list the number of words in both the abstract and article body (excluding abstract, acknowledgments, financial disclosures, legends, and references), and the number of figures, tables, and supplemental information (if zero, state zero for each item). Articles titles may not contain acronyms, and should be less than 100 characters. For full-length articles (Archival Reports, Priority Communications, Reviews), a short title of 55 characters or less (including spaces) must also be included. Only standard acronyms (e.g., ADHD, PTSD, etc.) and gene symbols are permitted in short titles.

**Abstracts** Abstracts should be formatted according to the article type and should not exceed the word limits as detailed above. The Methods section should explicitly state the sample size of the trial. For those manuscripts that require clinical trials registration (see Clinical Trials Registration section, below), the registry name, URL, and registration number should be included at the end of the abstract.

**Acknowledgments** This section should precede the References, and should include acknowledgments for personal and technical assistance, in addition to detailed information regarding all sources of funding, including grant and other material or financial support. The role of study sponsor(s), if any, should also be detailed. If a research group is listed as an author, then the individual members of the research team must be named here. Written permission should be obtained from all individuals named in this section. Data that was published previously, such as in an abstract or poster, should also be identified here.

**Financial Disclosures** This section **must** include the required conflict of interest statements for each author (see section on disclosure, below).

# GUIDE FOR AUTHORS

**References** References should be numbered and listed by their order of appearance in the text. Refer to references in the text with the appropriate number in parentheses. References in tables and figures should also be numbered. List all authors; if there are more than seven authors, list the first six then *et al.* Periodical abbreviations should follow those used by Index Medicus. The following are sample references for a journal article (1), a book (2), and an edited book (3).

1. Krystal JH, Carter CS, Geschwind D, Manji HK, March JS, Nestler EJ, *et al.* (2008): It is time to take a stand for medical research and against terrorism targeting medical scientists. *Biol Psychiatry* 63:725–727.
2. American Psychiatric Association (1994): *Diagnostic and Statistical Manual of Mental Disorders, 4th ed.* Washington, DC: American Psychiatric Press.
3. Martin JH (1985): Properties of cortical neurons, the EEG, and the mechanisms of epilepsy. In: Kandel ER, Schwartz JH, editors. *Principles of Neural Science, 2nd ed.* New York: Elsevier, 461–471.

**FIGURES AND TABLES** Figures and tables should be cited in the text, numbered consecutively (i.e., 1, 2, 3) in the order of their mention, and have brief descriptions. If not included in the manuscript file, tables should be uploaded individually in an editable format, such as DOC. Table footnotes should use superscript lowercase letters, rather than symbols.

The preferred file format for figures and graphics is EPS, TIFF, or PDF. Please upload high quality versions of each figure individually (i.e., two figures should be uploaded separately as Figure 1 and Figure 2). Parts/panels in composite figures should be labeled with capital letters (A, B, C). Each figure should be consistent in color, size, and font and be designed proportionally so that each item within it is to scale (particularly numbers, letters, and symbols) so it can later be sized as needed without loss of legibility or quality. Figure titles and legends should be included as text in the manuscript file and not in the figure file itself. Complete instructions for electronic artwork preparation and submission can be found at <http://www.elsevier.com/artwork>.

**3D NEUROIMAGING** You can enrich your online articles by providing 3D neuroimaging data in NIfTI format. This will be visualized for readers using the interactive viewer embedded within your article, and will enable them to browse through available neuroimaging datasets; zoom, rotate and pan the 3D brain reconstruction; cut through the volume; change opacity and color mapping; switch between 3D and 2D projected views; and download the data. The viewer supports both single (.nii) and dual (.hdr and .img) NIfTI file formats. Recommended size of a single uncompressed dataset is ≤100 MB. Multiple datasets can be submitted. Each dataset should be zipped and uploaded separately. Please provide a short informative description for each dataset by filling in the 'Description' field when uploading a dataset. If an article is accepted, all uploaded datasets will be available for download from the online article on ScienceDirect. If you have concerns about your data being downloadable,

**REVIEW PROCESS** The actual selection of reviewers will be made by the editors. As a general rule, papers will be evaluated by three independent reviewers and, on occasion, an additional review for statistical adequacy may also be obtained. The comments of the reviewers are generally communicated to the authors within 30–45 days of submission. Authors should contact the Editorial Office if the delay has been longer.

*Biological Psychiatry* excludes reviewers who work at the same institution as any author, or those who have any other obvious conflict of interest. The identity of individual reviewers remains confidential to all parties except the Editorial

**AUTHORSHIP** To qualify for authorship, an individual must have participated sufficiently in the work to take public responsibility for all or part of the content, given final approval of the submitted version, and made substantive intellectual contributions to the submitted work in the form of: 1) conception and design, and/or acquisition of data, and/or analysis of data; and 2) drafting the article, and/or revising it critically for important intellectual content. Authorship also requires agreement to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are

**CORRESPONDING AUTHOR** By electing to approve and finalize the submission of a manuscript as the corresponding author, *Biological Psychiatry* assumes the author's acknowledgment and acceptance of the following responsibilities: 1) act as the sole correspondent with the Editorial Office and the publisher, Elsevier, on all matters related to the submission, including review and correction of the

**DISCLOSURE OF BIOMEDICAL FINANCIAL INTERESTS AND POTENTIAL CONFLICTS OF INTEREST** *Biological Psychiatry* requires all authors to provide full disclosure of any and all biomedical financial interests. Further, we require all authors for all article types to specify the nature of potential conflicts of interest, financial or otherwise. This disclosure includes direct or indirect financial or personal relationships, interests, and affiliations relevant to the subject matter of the manuscript that have occurred over the last two years, or that are expected in the foreseeable future. This disclosure includes, but is not limited to, grants or funding, employment, affiliations, patents (in preparation, filed, or

please provide a video instead. For more information, see: <http://www.elsevier.com/3DNeuroimaging>.

**SUPPLEMENTAL INFORMATION** Supplemental information, relevant to the work but not critical to support the findings, is strongly encouraged by the *Journal* and is made available via links in the online article but not published in print. All such material is peer-reviewed, but not typeset or proofed and so should be carefully prepared. It is not appropriate to move the entire text of the Methods and Materials to the supplement to adhere to the *Journal's* word count limits. Unlike other files, all supplemental information (including text, tables, and figures) should be uploaded in a single DOC file whenever possible. Supplementary figures and tables should appear with their legends/keys, and be numbered consecutively (i.e., S1, S2). References should be included as a separate list from the references in the main manuscript file. Multiple supplemental files are allowed, but for the ease of readership, authors should use a single file when possible. The CONSORT diagram and checklist for randomized controlled trials will be published as supplemental information. Multimedia content, in formats such as AVI or MPG, is also encouraged and should be uploaded as a supplement.

**REFEREE SUGGESTIONS** For all new submissions (except Commentaries and Correspondence), authors will be required to include the full names and contact information (affiliation, e-mail, and telephone number) of 6 individuals who are especially qualified to referee the work and would not have a conflict of interest in reviewing the manuscript. Affiliations of the suggested referees should all be different, and none should have the same affiliation as any of the authors. Editors are not appropriate to suggest as a reviewer.

**REVISIONS** Authors may upload a "tracked changes" version of their paper as a Response to Reviewers file, but should always include a "clean" non-marked version of the manuscript. Authors should prepare a unique file (separate from the cover letter) with responses to reviewers' comments. In addition, the submission of revised manuscripts (except Commentaries and Correspondence) will require a new unique file with a brief summary for the *Journal* feature, In This Issue. The blurb should be uploaded as a text file, 50–75 words in length, and be written in laymen's terms. If revisions are a condition of publication, only two revised versions of the paper will be considered.

**COVER ART** *Biological Psychiatry* generally selects cover art relevant to an article appearing in that issue. The *Journal* encourages the submission of scientifically and visually interesting images that do not appear in the paper, but that would be suitable for cover art, particularly those that summarize or represent the article's findings. Authors may upload images to be considered for the cover during the submission process, or e-mail them separately to the Editorial Office. Any such images must be the property of the submitting authors. Figures that appear in the paper are automatically considered for covers.

Office. Reviewers are expected to treat manuscripts under peer review with the strictest confidentiality.

Authors should be aware that manuscripts may be returned without outside review when the editors deem that the paper is of insufficient general interest for the broad readership of *Biological Psychiatry*, or that the scientific priority is such that it is unlikely to receive favorable reviews. Editorial rejection is done to speed up the editorial process and to allow the authors' papers to be promptly submitted and reviewed elsewhere. All submissions (with the general exception of Editorials, Commentaries, and Correspondence) will be subject to peer review.

appropriately investigated and resolved. All individuals who meet criteria for authorship must be named as authors, and all individuals named as authors must meet all authorship criteria. If authorship is attributed to a group (either solely or in addition to 1 or more individual authors), all members of the group must meet the full criteria and requirements for authorship as described above. Requests to change the corresponding author or to add/delete any authors must be submitted directly to the Editorial Office.

typeset proof; 2) assurance that all individuals who meet the criteria for authorship are included as authors on the manuscript title page, and that the version submitted is the version that all authors have approved; and 3) assurance that written permission has been received from all individuals whose contributions to the work are included in the Acknowledgments section of the manuscript.

granted), inventions, honoraria, consultancies, royalties, stock options/ownership, or expert testimony. This policy of full disclosure is similar to the policies of the ICMJE and other such organizations. The conflict of interest statements should be included in the Financial Disclosures section of the manuscript at the time of submission for all article types. If an author has nothing to declare, this must be explicitly stated. Authors should contact the Editorial Office with questions or concerns, but should err on the side of inclusion when in doubt.
