This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Submitted to Neuroscience

Anodal transcranial direct current stimulation enhances time to task failure of a submaximal contraction of elbow flexors without changing corticospinal excitability

Achraf Abdelmoula, Stéphane Baudry and Jacques Duchateau

Université libre de Bruxelles (ULB), Laboratory of Applied Biology and Neurophysiology,
ULB Neuroscience Institute, 808 route de Lennik, 1070 Brussels, Belgium

Running title: tDCS and neuromuscular fatigability

Keywords: electromyography, fatigue, motor evoked potential, transcranial magnetic stimulation

The authors declare no competing financial interests.
