Tracing dust transport from Middle-East over Delhi in March 2012 using metal and lead isotope composition

S. Kumar, S.G. Aggarwal, J. Malherbe, J.P.G. Barre, S. Berail, P.K. Gupta, O.F.X. Donard

PII: S1352-2310(16)30171-6

DOI: [10.1016/j.atmosenv.2016.03.002](https://doi.org/10.1016/j.atmosenv.2016.03.002)

Reference: AEA 14484

To appear in: *Atmospheric Environment*

Received Date: 17 November 2015

Revised Date: 29 February 2016

Accepted Date: 2 March 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

20 **Highlights**

- 21 • A severe dust-storm crossed over New Delhi during March 20 - 22, 2012.  
22 • Satellite images confirm that this storm was originated in Middle-East.  
23 • Results suggest Ni and V can be used as source tracers for these dust aerosols.  
24 • First Pb isotope signature study in dust and urban aerosols of New Delhi.  
25 • Pb isotope analysis is a good tool for understanding aerosol sources.  
26
