

# Accepted Manuscript

Atmospheric deposition in coniferous and deciduous tree stands in Poland

Anna Kowalska, Aleksander Astel, Andrzej Boczoń, Żaneta Polkowska

PII: S1352-2310(16)30203-5

DOI: [10.1016/j.atmosenv.2016.03.033](https://doi.org/10.1016/j.atmosenv.2016.03.033)

Reference: AEA 14515

To appear in: *Atmospheric Environment*

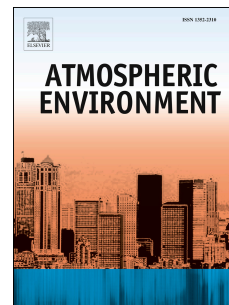

Received Date: 3 August 2015

Revised Date: 29 February 2016

Accepted Date: 12 March 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

Chemistry of rainfall depends on site, water amount, sea salt effect, and pollution

Type of tree stand considerably influences the chemical composition of precipitation

Coniferous species cause acidification of PRECIPITATION

Deciduous species raise pH of precipitation

Chemistry of precipitation in the forests of Poland is typical of European countries
