Wave of chaos in a spatial eco-epidemiological system: Generating realistic patterns of patchiness in rabbit-lynx dynamics

Ranjit Kumar Upadhyay, Parimita Roy, C. Venkataraman, A. Madzvamuse

PII: S0025-5564(16)30143-2
DOI: [10.1016/j.mbs.2016.08.014](https://doi.org/10.1016/j.mbs.2016.08.014)
Reference: MBS 7839

To appear in: *Mathematical Biosciences*

Received date: 27 February 2016
Revised date: 10 July 2016
Accepted date: 31 August 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We have designed and studied the extended version of two-species Holling-Tanner predator-prey system.
- Existence of the equilibrium points and their linear and nonlinear stability analysis has been studied.
- The dynamical transitions in the model have been observed through Hopf-bifurcation analysis.
- Chaotic dynamics is depicted using bifurcation analysis and plotting maximum Lyapunov exponents.
