The effect of incidence function in backward bifurcation for malaria model with temporary immunity

P. Roop-O, W. Chinviriyasit, S. Chinviriyasit

PII: S0025-5564(15)00089-9
DOI: [10.1016/j.mbs.2015.04.008](https://doi.org/10.1016/j.mbs.2015.04.008)
Reference: MBS 7631

To appear in: *Mathematical Biosciences*

Received date: 7 September 2014
Revised date: 25 March 2015
Accepted date: 6 April 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Malaria model with standard incidence rate exhibits the backward bifurcation.
- Backward bifurcation does not occur in malaria model with nonlinear incidence rate.
- Global stability analysis is based on constructing a Lyapunov function.
- Sensitivity analysis of model parameters is helpful to design control strategies.
