This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Genomics of Lepidoptera Saliva Reveals Function in Herbivory

Loren J. Rivera-Vega, Flor E. Acevedo, and Gary W. Felton*

Dept. of Entomology, Pennsylvania State University, University Park, PA 16802

Highlights

- Insect saliva plays an important role in host plant-insect dynamics.
- Genomic studies have begun to unravel specific roles of Lepidoptera saliva in herbivory.
- The composition of insect saliva changes depending on several factors including diet.
- Functional studies of molecules identified in the saliva of herbivore
 Lepidoptera are necessary to confirm their role.
- Lepidoptera saliva potentially mediates complex ecological interactions.
