This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Research highlights:

- dog-owners think that humans recognize many emotions in dogs
- subjects report that humans recognize more emotions in dogs than dogs in humans
- subjects think that primary emotions are more recognizable than secondary ones
- *activity* and *assertiveness* underlie the human-constructed affective space of dogs
