This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Common non-human animal personality models are examined and compared.
- Limitations of existing shelter dog behaviour tests are highlighted and discussed.
- Possible improvements for test protocols are suggested.
- Physiological measures of arousal may increase accuracy of behaviour tests.
- A mixed-model approach combining tests and day-to-day observations is recommended.
